Gas to Liquids technology using CO2 to make Alcohol

Structured Data

```
<script type= "application/ld+json">
  {"@context":"http://schema.org",
   "@type":"WebPage",
   "name":"Gas to Liquids technology using CO2 to make Alcohol",
   "description":"Liquid CO2, water and electricity through our device can make alcohol, which can be further used to
   make gasoline or other products. The purpose of this platform is to provide experimentation and development of novel
   gas to liquids (GTL) technologies for the utilization and mitigation of carbon dioxide."
  }
</script>
```

Liquid CO₂, water and electricity through our device can make alcohol, which can be further used to make gasoline or other products. The purpose of this platform is to provide experimentation and development of novel gas to liquids (GTL) technologies for the utilization and mitigation of carbon dioxide.
